KNOWN ISSUES

Existing cart sessions do not load list of products

PASSWORD NOT HASHED DO NOT USE IN PRODUCTION

Admins can't actually do anything. Whoops.

New Cart does not load projects.

S E T U P

Run the DB-CONFIG.TXT file in your MySQL browser.

DB-Connector and connect.php uses the following db data:

```
$db_server = "localhost";

$db_name = "kodiak";

$db_user = "root";

$db_passwd = "1234";
```

By default, the admin login is 'admin', '1234';

Obviously, from the state of our project, we ran into some pretty

serious problems early. Getting started was hard, but not working at

cross purposes was harder. Google drive is not meant for collab coding

We redesigned the front end at least twice, and each time it broke

the back end completely. Andrew had at least three versions he was working

on: The version tied to Apache, the version tied to Web Matrix and

the "pushed" version tied to Google Drive. Keeping all the files

current was a major chore. Next project, we will use a tool built

for collab coding, like GitBash. Keeping the scrum board updated was

a full time job.

We think our main problem was a problem of mindset. Andrew specifically

was stuck "outprioritizing" this project with other schoolwork. If

the sprints were better planned, or more was at stake, we don't think that would have occured.

At least our front end is pretty.
